

INSTRUCTIONS – Stairs

TOOLS / SUPPLIES NEEDED:

- 1/2" Wrench

BEFORE STARTING:

- You should have your stairs and two leg poles.
- Measure the water depth where you're putting your stairs so you have an idea of how long you need your stairs.

STEP 1:

- Insert stair poles (the poles with the flat, square footpads) into the leg sleeves.

STEP 2:

- Carry your stairs to where you'd like to attach them to the pier and extend them to the angle you'd like them set.

Pier of d'Nort 6035 Hwy 70 East · St. Germain, WI 54558 · 715-941-4707

STEP 3:

- Attach your stairs using the grippers, to the side of the pier section.

STEP 4:

- If your stair poles are not hitting the lake bottom, or are uneven, use your half inch wrench to adjust to that point. You can either get in the water to do this or bring the stairs back up and adjust.

Now you're ready to use your stairs!
